MAJOR PROPERTIES OF APPOLO HYDROGELS

Liquid hydrogels have no fixed structure, they spread over the wound easily taking its form.

Gels are transparent, they allow control of the wound process.

They create a permanent humid medium in the wound that is optimal for wound healing.

Hydrogels accelerate demarcation and rejection of the necrotic tissues.

Products have antimicrobial activity.

A pronounced cooling effect of hydrogels to patients with burns, which quickly eliminates pain and reduces the destruction depth.

They have moderately pronounced absorption properties, absorbing bacterial toxins, microbe cells.

Removal of dressings is easy, practically painless and without traumatization of the granulation tissue.

Moscow, 2016
The products are intended for first aid and first and third degree burns. They are ready for use. The products are developed in cooperation with Vishnevsky Surgery Institute. Hydrogel products are intended for use at industrial enterprises, medical healthcare facilities and as a household product.
